“Bacterial & Viral Protection During Training and CPR”

CPR Bio-Barrier® Faceshield

The CPR Bio-Barrier® Training Shield

“Disinfecting CPR manikins between students is common practice, however, the exhaled air remaining in the manikin’s lungs from the previous student still constitutes a potential health risk”!

The CPR Bio-Barrier® Training Shield provides over 99% bacterial and viral filtration efficiency with minimal resistance to the passage of air. By reducing the risk of contamination from the exhaled breath remaining in the manikin, you remove the need for simulated breathing or wiping down of the manikin between students thus saving training time and promoting “real life” skills.

The large shield size of the CPR Bio-Barrier® Training Shield provides excellent coverage of the face of any manikin. The pliable yet extremely strong shield provides excellent sealing characteristics against the manikin's face.

Packaged in a unique “tissue box style” dispenser pouch, the CPR Bio-Barrier® Training Shield is a simple, cost effective method of improving student safety during CPR instruction.

The CPR Bio-Barrier® Faceshield

The 2-way, biological filter of the CPR Bio-Barrier® Faceshield will prevent the passage of over 99% of the viruses and bacteria that cause diseases such as Tuberculosis, Hepatitis and HIV*! It also acts as a physical barrier to moisture, helping to prevent the transfer of body fluids.

During a breathing and/or cardiac emergency, the graphic illustrations on the faceshield help to prompt the rescuer in performing rescue breathing. Printed landmarks on the faceshield assist the rescuer in correctly positioning the CPR Bio-Barrier® Faceshield.

Packaged in a compact and durable “easy open” polyethylene pouch, the CPR Bio-Barrier® Faceshield fits easily into wallets, purses and First Aid kits ready for any breathing emergency.

Also available in a convenient, attractive

keychain pouch, the CPR Bio-Barrier® Faceshield can be attached to your keyring, purse or sports bag or kept securely in the glove compartment of your vehicle.

*Independent laboratory tested

NOTE: This device is designed for use by persons trained in CPR and in the use of this type of barrier device. This device does not guarantee complete protection from disease transmission.
