

## CLINICAL "SNIPPETS"

### **Coronary perfusion pressure and return of spontaneous circulation after prolonged cardiac arrest.**

Reynolds JC, Salcido DD, Menegazzi JJ.

Prehosp Emerg Care. 2010 Jan-Mar;14(1):78-84.

**Overview:** To test the hypothesis that swine achieving return of spontaneous circulation (ROSC) will have higher pre-shock mean coronary perfusion pressure (CPP) and higher pre-shock area under the CPP curve (AUC) than swine not attaining ROSC.

**Conclusion:** Higher CPP threshold and dose are associated with and predictive of ROSC.
