Gasping during cardiac arrest

Zuercher M, Ewy GA.
Department of Anaesthesia and Intensive Care,
University Hospital, Basel 4031, Switzerland.

Curr Opin Crit Care. 2009 Jun;15(3):185-8

Overview: The purpose of this study is to review the prevalence and significance of gasping in patients experiencing cardiac arrest.

Conclusions: Gasping frequently occurs during cardiac arrest. Public and emergency medical dispatchers must be more aware of its presence and significance.
